ABOUT ME

I have more than 4 years of professional experience in web development. High analytical and research skills allow me to work effectively with large amounts of information and quickly find high-quality solutions to complex problems.

I love to learn new technologies and expand my current skills, but also pass on my knowledge to others. Have experience in mentoring developers.

Capable to work both alone and in a team.

Although I have experience in both frontend and backend as a full stack, I prefer to work on server side.

WORK EXPERIENCE

05.2019 -
04.2022

Full Stack Developer @ Exceed Team

- Finalisation of existing projects
- Designing new projects architecture
- Building APIs according to specifications
- Code review

04.2022 -
Present

Full Stack Developer @ Fortech

- Adding new functionality to existing applications
- Developing applications and services from scratch
- Communication with the team and customers
- Designing and developing dynamic and reusable components
- Optimisation and support of existing projects
- Mentoring junior developers.

EDUCATION

2014-2018

Bachelor of Computer Science

Southern Federal University, Russia

Institute of Mathematics, Mechanics
and Computer Sciences

Fundamental Informatics and Information
Technologies

RECENT PROJECTS

NDA | E-Commerce (B2C)

Python, FastAPI, Faust, PostgreSQL, Kafka, Docker, Grafana, Loki

Service that provides the calculation of individual promos for each user, depending on their activity on the app: purchases, views of certain categories of goods, etc.

- Developing micro service from scratch
- Implementing new features
- Creating and supporting REST API
- Cover service with tests
- Working on stream processing from Kafka
- Performance testing topics

NDA | Drop Shipping

Python, Django, PostgreSQL, Docker, Redis, React, jQuery

Web system to automate drop shipping business by giving users everything they need to find, list, and fulfill products on their eCommerce store.

- Working with third party API as Shopify, SureDone, AliExpress
- Implementing new features
- Creating and supporting REST API
- Fixing bugs
- Updating to new UX/UI
- Working on app Chrome extension

NDA | Finance, Culture

Python, FastAPI, Docker, Celery, RabbitMQ, Lua, Tarantool, Clickhouse

Mobile application BE for virtual bank card. The money credited to the card may be spent by a young person at cultural institutions.

- Implementing external API for banks
- User analytics data processing
- Creating and supporting REST API
- Implementing parsers for CSV documents
- Adding tickets and events registries
- Collecting statistics on tickets purchase

NDA | Real Estate

Python, Django (DRF), PostgreSQL, Docker, Redis, Celery, RabbitMQ, Pandas, React, Redux, TypeScript, Reactstrap, Styled Components, Axios

Web application for real estate agents. CRM was intended to help agents to get all info about customers and their leasing.

- Integrating third party services
- Implementing custom chat
- Creating and supporting REST API
- Optimizing DB queries
- Business logic implementation
- Pushing notifications
